Persona: 
$$M_1 = 60 \text{kg}$$
  $V_1 = 0$   $V_1' = -0.5 \text{ m/s}$   $C=2PS=: M_2 = 5 \text{kg}$   $V_2 = 0$   $V_2' = ?$ 

En el procés de llangament s'ha de conservar la quantitat de moviment del sistema:

$$m_1 V_1' + m_2 V_2 = m_1 V_1 + m_2 V_2$$
  
 $\omega(0,5) + 5. V_2' = 0$   
 $V_2' = -\frac{\omega(-0,5)}{5} = 6 \frac{m_1}{5}$ 

La capsa surta 6 m/s.
